LONGHORN CATTLE SOCIETY HERD HEALTH DECLARATION

Autumn Show & Sale, Stoneleigh, 18 September 2021

- Vendors not accredited via a health scheme wishing to blood test should do so not more than 60 days prior to the sale.
- Vendors who are active members of a CHeCS approved health scheme and holding current health scheme accreditation are exempted from blood testing for the specified diseases. Members must apply to their Health Scheme provider for an animal health declaration card prior to the sale.

The following specific requirements are as follows:

Compulsory for the Stoneleigh Sale

BVD:

CHeCS health scheme members:

- Accredited
- AND**
- Vaccinated (all cattle except calves at foot)

Vendors privately testing:

- Negative blood test for Antigen & then vaccinated. Vaccination must be given post a clear blood test
- OR**
- 'Tag & Tested' & then vaccinated. Vaccination must be given post a clear tissue sample test.

Calves at foot should either have a negative blood test for Antigen, or been tag & tested negative for Antigen. There is no requirement to vaccinate calves at foot.

Johnes:

CHeCS health scheme members:

Risk Level R1 or R2 no further requirements

Risk Level R3, R4 or R5 Negative blood test (all cattle except calves at foot)

Vendors privately testing:

- Negative blood test (all cattle except calves at foot)

Blood should be drawn before the TB test is carried out.

Faecal test would be permitted if blood test timing is not compatible with TB test timing. Johnes' test sensitivities are poor and therefore membership of a health scheme is preferred.

TB

In all cases vendors must test all animals over 42 days old on the day of the sale for TB, irrespective of home testing interval.

Recommended for the Stoneleigh Sale

IBR:

CHeCS health scheme members

- Accredited

Vendors privately testing:

- Negative blood test

When vaccinating a marker vaccine must be used. (Unless routinely vaccinating, vaccinations should be done post negative blood test)

Leptospirosis:

CHeCS health scheme members

- Accredited

Vendors privately testing:

- Negative blood test

Unless routinely vaccinating, vaccinations should be done post negative blood test.

Neospora

Testing recommended for all females.

All animals must be free from any contagious disease such as warts, ringworm, lice and mange. Where animals still exhibit signs following treatment a veterinary certificate is required.
